

CRYPTO
CLOUD

Unlimited communication.
Unparalleled security.

15+ Years of Encryption Expertise

The team at CryptoCloud have been at the forefront of the MOBILE encryption business for decades. We deliver solutions and robust Security work flows that far exceed our competition.

We thrive on our partnership's, technology and products.

Core Values

We embrace change and
initiate opportunity

Teamwork makes the
dream work

We act with credibility,
professionalism and Integrity to
instill public trust and confidence

A promise made is a
promise delivered

For us, security comes first.

CryptoCloud has been well established in the market for over 6 years. Our OS, applications and devices have undergone years of advancements and updates. We pride ourselves in working with only the worlds best developers and support staff.

Encryption done right

We take your privacy seriously. The setup of our service makes no compromise with security.

Secure against any threat

All our products employ proven cryptographic protocols with maximum-length encryption keys.

Pure peer-to-peer messaging

Our servers just facilitate the communication between users. We don't store or copy messages.

User control over PGP keys

Encryption keys are generated only on the device. Private keys are never stored server-side.

Calls that leave no trace

Our infrastructure is designed around the concept of zero-knowledge. No sensitive data is stored outside the devices.

CRYPTO

X2

360-degree protection with
Secure OS

Crypto X2

- ✓ Fully managed 360 Degrees
- ✓ Customized Hardware
- ✓ Peer to Peer Voice and Video Calls
- ✓ Serverless Peer to Peer Chat & PGP
- ✓ Global Data Sim card with VPN or
use your own SIM card
- ✓ Customized dashboard for easy navigation
- ✓ World Class 24/7 Support
- ✓ Secure Callender
- ✓ Zero Attack Surface
- ✓ Keys on device

CRYPTO WORK

Dual profile device for the
serious professional

Crypto Work

- ✓ Crypto Chat & Vault
- ✓ Unlimited Apps with Aurora Store
- ✓ Advanced Privacy Features
- ✓ Plans from 6 to 12 months
- ✓ Dedicated Account Manager
- ✓ 5x 7 Support
- ✓ Devices included
- ✓ For Calling and Text use own local sim
- ✓ 1 GB Global or NA+EU included with Top up
or use your own SIM card

Crypto Cloud SIM Global Data

Secure and Anonymized Global SIM Card.

Uncompromised Protection

Using a safe and protected network is a must in the fight to protect your sensitive data. The ever-increasing digitalization has incentivized bad actors to find new threat opportunities and leverage more advanced attacks. The current standards of cellular protection, including SS7 firewall and a simple VPN, are not sufficient as threats are coming in different shapes and sizes. To protect against the more sophisticated attacks, we leverage cutting-edge technology to provide cellular service of the highest security grade with world-class coverage.

Our advantages

Decentralized cellular infrastructure

All data traffic is rerouted through different data processing hubs which are strategically located in privacy-friendly countries.

Protection against Signaling threats

With our built-in Smart SS7 and diameter firewall, we provide multi-layered protection against signalling attacks.

Packet data domain protection

Protects against a variety of attacks in the IP/PD domain, including malware delivery, malicious data leakage, and device redirecting.

Guaranteed privacy

All phone traffic is channelled through an encrypted private network hosted in the staple of privacy - Switzerland.

Protection against SMS attacks

Our security-hardened Sim Tool Kit, combined with a silent SMS firewall prevents the most sophisticated SMS-based attacks (such as Simjacker, and others).

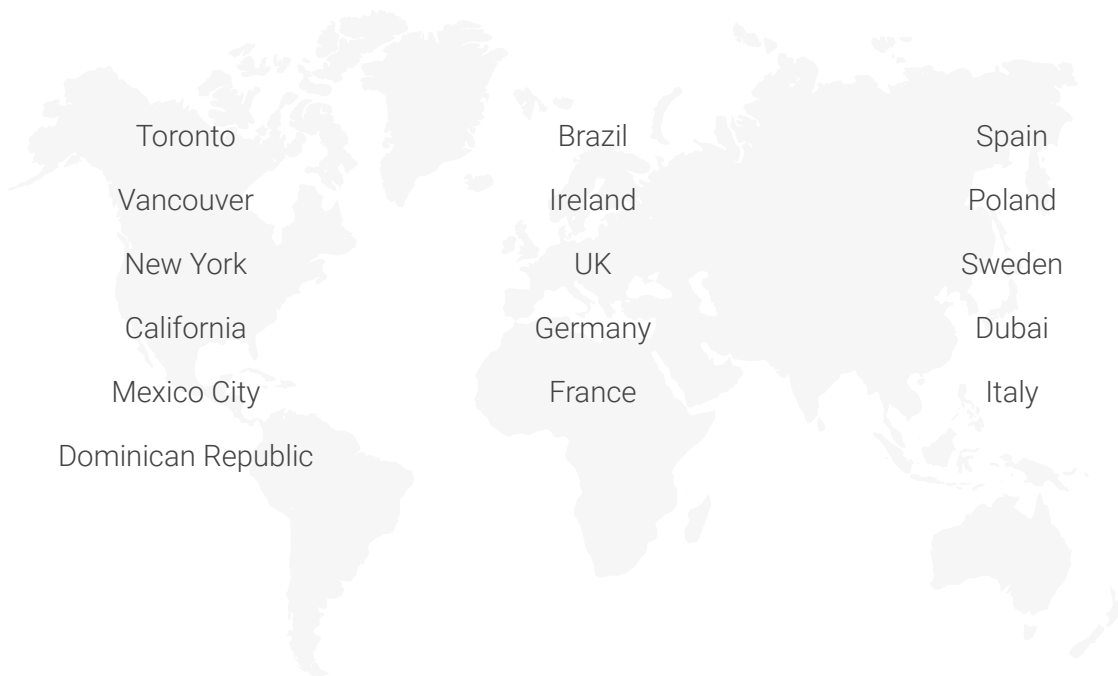

World-class coverage

We use cutting-edge Dynamic Multi-IMSI (DMI) technology with instant over the air (OTA) updates, resulting in better coverage worldwide without the need to replace SIM cards physically.

Choose a partner that is closest to you.

Our reseller network has been trained to provide you with the best sales experience in the market.
